                                                                                                                                                                                                                                                                                                                                      Compositions (e.g. vaccines) containing PRO polypeptides and methods of using these compositions are useful in the treatment and diagnosis of immune-related disorders. Such disorders include immune-mediated inflammatory disorders (e.g. osteoarthritis), non-immune-mediated inflammatory disorders (e.g. diabetes mellitus), infectious disorders (e.g. granulomatous hepatitis), immunodeficiency disorders (e.g. AIDS), autoimmune disorders (e.g. rhemnatoid arthritis), immune-related renal diseases (e.g. cirrhosis), demyelinating diseases of the peripheral or central nervous system (e.g. Guillain-Barre syndrome), immune-mediated skin diseases (e.g. contact dermatitis), neoplasias and transplantation associated diseases. The polynucleotide sequences of the invention may be used in gene therapy. AAU09178-AAU09186 represent the novel human

```

The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, have autoing disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis, virial and bacterial infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hybridises under stringent conditions to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagonising) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, and for obtaining an antibody molecule specific for the soluble binding protein of the invention, from a population or panel of antibody consecules of diverse binding specificity. The soluble protein is further cuseful in manufacture of a medicament for treating an IL-22 mediated consecution of IL-TIF/IL-22 or the soluble protein, that modulates binding consecution to IL-TIF/IL-22 or the soluble protein, that modulates binding consecution, where the antibody is useful for determining presence of the soluble protein, where the antibody is detectably labelled. The present amino calcid sequence represents the human IL-TIF/IL-22 binding protein #2 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new polynucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-22BP), where the complementary sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polynucleotide and polypeptide of soluble protein which binds to interleukin-TIF/IL-22 useful for inhibiting effect of IL-TIF/IL-22

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The patent discloses novel human cytokine, ZCYTO18 protein and its corresponding DNA. ZCYTO18 protein induces proliferation of cells expressing zcytor11, a receptor for ZCYTO18 or induces cytotoxicity in K5626 cells. ZCYTO18 DNA is useful for detecting a genetic abnormality in a patient. ZCYTO18 DNA and its antibodies are useful for detecting cancer and inflammation. ZCYTO18 protein is useful for killing cancer cells. It is useful for increasing platelets in a patient or injured tissue. It is also used in gene therapy. The present sequence is human zcytor16, which is a naturally expressed soluble receptor antagonist of ZCYTO18 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-DEC-1999; 99US-0471767

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytokine receptors, fragments and antibodies are useful for treating cuseful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful for modulating to the physiology or development of a cell or tissue culture cells. A curified DCRS is useful as a reagent to detect antibodies generated in cresponse to the presence of elevated levels of expression, or endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients suspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for cuseful as potent antagonist, in detecting or quantifying ligands, for constitution of diagnosing various immunological conditions related to expression of the protein or cells which express the protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                           The invention relates to a human cytokine receptor polypeptide, designated zcytor16. The zcytor16 polypeptide can be expressed by standard recombinant methodology and can bind to IL-TIF (undefined). The zcytor16 protein is useful for: inhibiting IL-TIF induced proliferation or differentiation of hematopoietic cell(s) (progenitors); reducing IL-TIF induced or IL-9 induced inflammation; and suppressing an
                               used to reduce progression and symptoms of cancer. Zcytor16 polypeptide can also be used to detect IL-TIF levels which is indicative of pathological conditions including inflammatory states (e.g. rheumatoid arthritis) and cancer. Antibodies that bind zcytor16 polypeptides and to polypeptides themselves are useful for the treatment of inflammatory bowelion, inflammatory diseases (e.g. infection, asthma, inflammatory bowelion) disease, rheumatoid arthritis and atherosclerosis) and autoimmune
                   diseases. The antibodies and zcytor16 polynucleotides are
                                                                                                                                              inflammatory response in a mammal with inflammation. Heteromeric/multimeric receptor polypeptides such as soluble zcytor 16/CRF2-4 can
                                                                                                                                                                                                                                                                                                    Claim 1; Page 186-188; 210pp; English.

The antibody is useful for determining presence of the soluble protein, where the antibody is detectably labelled. The present amino acid sequence represents the human IL-TIF/IL-22 binding protein #1 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hybridises under stringent conditions to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagonising) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble
                                                                                                                                                                                WO200224888-A2
                                                                                                                                                                                                                                                                                                        Human Pro peptide #57.
                                                                                                                                                                                                                                                                                                                                                                                                                ABG34086 standard; Protein; 231 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             binding protein of the invention, from a population or panel of antibody molecules of diverse binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated

                                                                                                                                                                                                                                                                                                turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides are useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in cancerous tumours and for screening for differentially expressed genes using microarray technology. The present sequence represents a human PRO
                                                                                                                                                                                                                                                                                                                                                                                                                              of the invention. The antibody may be used for detecting the PRO proteins of the invention and may be used to modify their activity. polynucleotides may be used as hybridisation probes for a CNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, to construct hybridisation probes for mapping the gene which encodes that PRO and for genetic analysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gurney . Fong S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               secreted and transmembrane polypeptides PRO polypeptides. The invention also comprises a method for producing the proteins of the invention by recombinant means and antibodies specific for the protein of the invention by recombinant means and antibodies specific for the protein of the invention means and antibodies specific for the protein of the invention.

                                                                                                                                                                    The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their
                                                                                                                                                                                                                                                                                                                      Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               depression; cardiovascular disease; myocardial infarction; renal failure; respiratory disease; liver disorder; Fanconi's syndrome; spleen disorder; type II diabetes mellitus; skeletal muscle disorder; immunosuppressive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cytokine receptor protein, sbg456548CytoRa #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAE17320;
                               treating cancers, infections, autoimmune disorders, haematopoietic disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis,
                                                                                          sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoietic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                                                    inflammatory response in a mammal with inflammation. Heteromeric/multimeric receptor polypeptides such as soluble zcytor 16/CRF2-4 can be used to reduce progression and symptoms of cancer. Zcytor16 polypeptides can also be used to detect IL-TIF levels which is indicative of pathological conditions including inflammatory states (e.g. rheumatoid arthritis) and cancer. Antibodies that bind zcytor16 polypeptides and the polypeptides themselves are useful for the treatment of inflammation, inflammatory diseases (e.g. infection, asthma, inflammatory bowel disease, rheumatoid arthritis and atherosclerosis) and autoimmune diseases. The antibodies and zcytor16 polynucleotides are also useful for detecting cancer. The present sequence represents the human zcytor16 extracellular domain fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               03-DEC-1999; YYUS-VIII

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      designated zcytor16. The zcytor16 polypeptide can be expressed by standard recombinant methodology and can bind to IL-TIF (undefined). The zcytor16 protein is useful for: inhibiting IL-TIF induced proliferation or differentiation of hematopoietic cell(s) (progenitors); reducing IL-TIF induced or IL-9 induced inflammation; and suppressing an

The present sequence is human DNAX cytokine receptor subunit 4.1 (DCRS4.1). DCRS4 gene is located on chromosome 6924.1-25.2. Cytokine receptors, fragments and antibodies are useful for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are useful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful for modulating
